

Microsystems in healthcare – An interactive scientific workshop

March 2 2012, Qulturum, Jönköping

Join a workshop with scientific perspectives on Microsystems in healthcare, **March 2 2012**.
We welcome abstracts for poster and short oral presentations.

During the last eight years our knowledge and understanding of the role of the Clinical Microsystems for improvement of care has matured considerably. The International Clinical Microsystem Festival is a yearly international conference for us who are engaged in the continuous improvement of health and welfare. The Scientific Day is connected to the Festival and is especially designed for us active in studying these endeavours together with practitioners. The workshop is based on how research and new knowledge from different disciplines further can develop and deepen our understanding and capacity to create best possible care. During the day we will have possibilities to share and explore research results, questions and methodologies.

Call for abstracts

We welcome abstracts for short oral and poster presentations in research related to the theories of clinical microsystems. An international board will evaluate all abstracts and some will be chosen for oral presentation. The abstracts should fit into one page, including figures and tables and be written in English, Times New Roman, 12 p. Plan for postersize: 70 x 100cm.

Deadline for abstracts: January 31 2012
